

# Qualitative research tools and data analysis

by Pr. Saliha Chelli

---

## Lecture Objectives

In this lecture, students will

- be introduced to qualitative tools
- know the process followed in this type of research
- Be introduced to the process of data analysis

# 1. Qualitative data collection methods

---

## **The main methods are:**

- interview,
- focus group,
- observation,
- collection of documents such as diaries, photographs, collection of narrative, journals,
- the think aloud method and
- open questionnaires.

# 1.2 Interviews

---

**There are three main kinds of interviews:**

- ❑ **The structured interview** is one in which the content and the procedures are organized in advance.
- ❑ This means that the sequence and wording of the questions are determined by means of a schedule and the interviewer is left little freedom to make modifications.
- ❑ It is characterize by being closed.
- ❑ This kind of interview is used in situation where a written questionnaire would in theory be adequate except that for some reason the written format is not feasible ( for example, because of the low level of literacy amongst the participants or the need to tighten control as in some market surveys or opinion poll) (DÖrneiy, 2007: 135).

- 
- 
- This kind of interview is used in situations where a written questionnaire would in theory be adequate except that for some reason the written format is not feasible (for example, because of the low level of literacy amongst the participants or the need to tighten control as in some market surveys or opinion poll) (Dörnyei, 2007: 135).

# The semi-structured interview

---

- **The semi-structured interview** is the most **common qualitative** data gathering tool during which the person being interviewed is the expert and the interviewer the student.
- This kind of interview involves a number of open ended questions based on the topic areas that the researcher wants to cover. The open ended nature of questions posed defines the topic under investigation but provides opportunities for both interviewer and interviewee to discuss some topics in detail.
- If the interviewee has difficulty answering a question or provides only a brief response, the interviewer can use cues or prompts to encourage the interviewee to consider the question further.

- 
- 
- A good interviewer needs to be able to put the interviewee at ease, needs good listening skills and needs to be able to manage an interview situation so as to collect data which truly reflect the opinions and feelings of the interviewee concerning the chosen topic.

# The unstructured interview

---

- ❑ **The unstructured interview** is an open situation having greater flexibility and freedom.
- ❑ It is similar to a free flowing conversation. Not detailed interview guide is prepared in advance, although the researcher usually thinks of a few (1-6) opening questions.
- ❑ During the interview, the researcher may ask an occasional question for clarification and may give reinforcement feedback, but interruptions are kept to the minimum (Dorneiy, 2007: 136).
- ❑ For an unstructured interview to be successful, the interviewer needs to establish good rapport with the interviewee.

## 1.2.1. Preparing for the Interview and designing the interview guide

---

- The complete interview process involves a series of carefully designed steps after having chosen the sample.
- The preparation of an interview guide containing a few relevant questions is necessary.
- A good interview guide requires careful planning followed by piloting (Dorneiy, 2007: 136).

## 1.2.2. Question Types

---

- The first few questions can be **factual questions** (family, job) to set the tone and create initial rapport.
- **Content questions:** experiences and behaviours, opinions and values, feelings, knowledge, sensory information (what has someone seen, heard...), background or demographic information.
- These categories concern different aspects of the participants overall view/ experience of the phenomenon and then we can get a rounded picture by including in our interview guiding questions that tap into each dimensions.

- 
- 
- **Probes** may include detailed oriented and clarification questions to increase the richness and depth of the responses.
  - The final **closing questions**. This permits the researcher to have a final say. Simple questions such as ‘Is there anything you like to add’ or ‘What should I have asked you that I didn’t ask you?’

## 1.2.3. Recording the interview

---

Some key issues of interview conduct are helpful such as:

- Recording the interview
- Starting the interview (the first few minutes are important to set the tone/ climate of the interview).
- We must show that we are really interested in what the interviewee has got to say and that we are a nice and reasonable and non-threatening person.
- Before starting the recording, we need to explain again the purpose for the interview.

## 1.2.4. Conducting the interview

---

- A good qualitative interview has two features:
  - a) It flows with the various parts connecting seamlessly.
- We must remember that we are there to listen (not to speak).
- B) It is rich in detail; it is an area where the skilful use of various probes can make a real difference.

## 1.3. Focus Groups

---

Focus groups - as the name suggests- involve a group format whereby the researcher records the responses of a small group (usually 6-12 members). The focus group is based on the collective experience of brainstorming, that is, participants thinking together, inspiring and challenging each other, and reacting to the emerging issues (Dorneiy, 2007: 144).

# 1.4. Observation

---

- The distinctive feature of observation as a research process is that it offers an investigator the opportunity to gather ‘live’ data from naturally occurring social situations.
- Observation, too, can be structured, semi-structured or unstructured.
- The structured observation is useful for testing hypotheses while the semi-structured and unstructured provide a rich description of a situation which, in turn, can lead to subsequent generation of data.

## 1.4.1. Classroom Observation

---

To organize the many different ways in which we can observe classrooms, two dichotomies are usually offered :

- ‘**structured** versus **unstructured**’. These are very similar to **quantitative** and **qualitative** distinction in observation terms.

- 
- 
- The first one is highly structured and involves going to the class with a specific focus and with concrete observation categories,
  - whereas the unstructured is less clear; the researcher needs to observe first what is taking place before deciding on its significance for research.

- 
- 
- The former involves completing an observation scheme,
  - while the latter involves completing narrative field notes, often supplemented by maps or diagrams (*Dorneiy, 2007 : 179*).

- 
- 
- Schemes – similar to questionnaires- have a range of systematic categories which allow the observer to record events quickly by using tally marks (*Dorney* : 180). Schemes also need to be piloted

**Section E: How Materials are Used (Cittravelu, 1995)**

QUALITY	CHARACTERISTICS	Yes	No	Notes
Control amount of help given	Models used but not for all students			
	Notes (language and ideas help)			
	Substitution tables			
	Stimuli like pictures, maps, tables, diagrams, etc			
Control Interactional mode	Allow good students to work on their own			
	Organize groups			
	Harder tasks to better students			
	Organize mixed ability interaction			
Give different targets of achievements	Provides model based on their proficiency			
Use a Variety of Approaches	Process of writing emphasized (Plan, Drafting, Editing)			
Evaluate according to individual capability and progress	Evaluate according to how much progress made			
	Provide suggestions			

Table 2: Checklists for Writing Classroom Observation (Noor Hanim, 2011, Appendix B, pp65-66)

## Diagnostic Checklist of Silent Reading

Student \_\_\_\_\_ Teacher \_\_\_\_\_  
 Grade Level of Passage \_\_\_\_\_ Date \_\_\_\_\_

Silent Reading	Observations			Comments
	1	2	3	
1. Points to individual words				
2. Runs a finger under each line				
3. Runs a finger down the page				
4. Whispers words				
5. Says words aloud				
6. Moves head while reading				
7. Holds book too close				
8. Holds book too far away				
9. Reads too slowly				
10. Reads too quickly				
11. Other notable behaviors (specify)				

St. Edward's University Observation Rubric

## Classroom Observation Form

Demonstrator: \_\_\_\_\_

Specialization: \_\_\_\_\_

Peer/Observer: \_\_\_\_\_

Date and Time: \_\_\_\_\_

Use criteria that apply to format of course observed.

Review Section	Description/Comments
<b>1. SUBJECT MATTER CONTENT</b> (shows good command and knowledge of subject matter; demonstrates breadth and depth of mastery)	
<b>2. ORGANIZATION</b> (organizes subject matter; evidences preparation; is thorough; states clear objectives; emphasizes and summarizes main points, meets class at a scheduled time, regularly monitors on-line course)	
<b>3. RAPPORT</b> (holds interest of students; is respectful, fair and impartial; provides feedback, encourages participation; interacts with students, shows enthusiasm)	
<b>4. TEACHING METHODS</b> (uses relevant teaching methods, aids, materials, techniques, and technology; includes variety balance, imagination, group involvement, uses examples that are simple, clear, precise, and appropriate; stays focused on and meets stated objectives)	
<b>5. PRESENTATION</b> (establishes online course or classroom environment conducive to learning; maintains eye contact; uses a clear voice, strong projection, proper enunciation, and standard English)	

## **In planning observations, one has to consider the following:**

---

- ❑ When, where, how and what to observe
- ❑ How much degree of structure is necessary in the observation
- ❑ The duration of the observation, which must be suitable for the behaviour to occur and be observed
- ❑ Timing of the observation period
- ❑ The context of the observation
- ❑ The nature of the observation (structures, semi-structures, unstructured)
- ❑ The need to choose the appropriate kind of recording (Cohen *et.al.*, 2007).

## 1.4.2 Techniques for collecting data through observation

---

- **Written descriptors:** the researcher can record observations of people, a situation or an environment by taking notes of what has been observed.
- **Video recording:** this frees the observer from the task of taking notes
- **Artefacts:** artefacts are objects which inform us about a phenomenon under study because of their significance to the phenomenon. Examples would be the doctor's equipment in a particular clinic or art work hung in residential care homes.

## 1.5. Qualitative Data Analysis

---

**What is meant by analysis:** after the mass of words are generated by interviews or observational data, they need to be described and summarised.

- It may require from the researcher to seek relationships between various themes that have been identified.
- Finally, the results are presented, generally as a descriptive and interpretive account of the data.

## 1.5.2. Data analysis process

---

The analysis of qualitative data usually goes through some or all of the following stages:

- Familiarisation with the data through review, reading, listening...
- Transcription of tape recorded material: it is the full script of an interview or a conversation, or the procedure of producing a written version of these methods.

## TRANSCRIPTIONS

- S You give us another quiz? (laughing)
- T Oh, quiz, old No, no, not today ... It's not going to be a quiz today ... sorry ... but, um, which today, Tuesday is it? (laughing)
- S Yes (responding)
- T I think on Thursday, if you like ... same as before ... only I'll stick up some new questions—the other ones were too easy ... um, okay, so I'll take some questions from, um, from newspapers over the last few weeks, right? so—means you've got to watch the news and read the newspapers and remember what's going on ... if you do, you'll win ... if not, well, that's life (responding)
- S Will be better than TV? (laughing)
- (laughing)
- T From the TV? ... What, er, what programmes ... (laughing)
- S News, even? (responding)
- T Did you say ...? Oh, oh, well, news, er, it's for the ... it'll be the same ... there'll be different ...? er, there'll be different ...? Different? Different ... The questions will be so different ... what? Different? (laughing)
- S Talks (responding)

- \* provides detailed evidence on specific aspects of classroom interaction
- \* can be analyzed through coding (category systems)
- \* time-consuming

- 
- Organisation of data: after the transcription, it is necessary to organise the data into easily retrievable sections
  - Coding (called indexing): for example, sections of text transcripts may be marked by the researcher in various ways: **underlining in a coloured pen, highlighting, giving a numerical reference, or bracketed with a textual code in the margin.**
  - Identification of themes
  - Development of provisional categories
  - Exploration of relationships between categories, finding possible and plausible explanations for findings
  - Report writing

# Qualitative data process

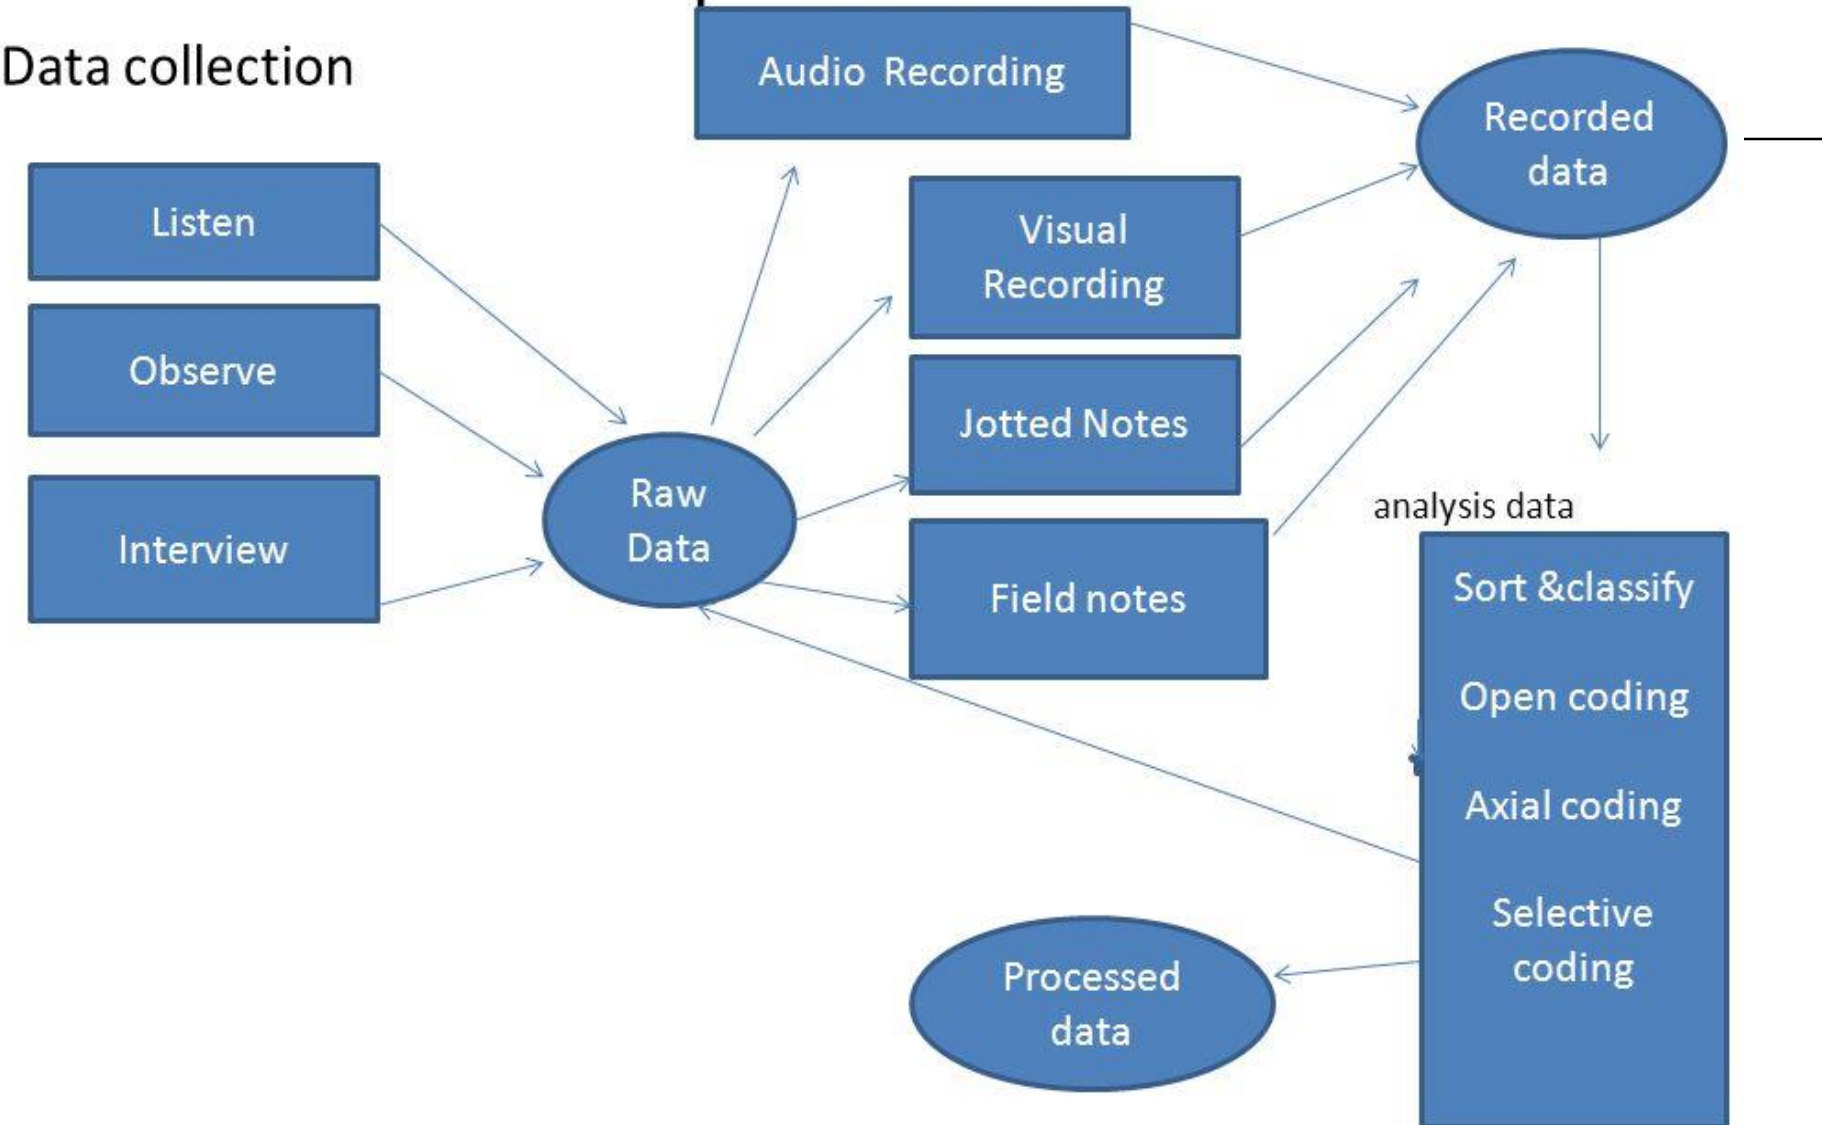

## process data

## analysis data

## Data collection

## CODING

- Coding can be done in any number of **ways**, e.g. assigning a word, phrase, number, symbol or color to each coding category.
- Coding can also be done by **color coding** different categories on transcript and field notes or **cut text segments** and place them on note cards.
- It uses labels **to classify** and assign meaning to pieces of information.

<sup>own home</sup>  
<sup>alone / lonely</sup>  
When you move into your own home, you're alone. There is <sup>people around</sup> no bustle of people around the  
<sup>miss company</sup> house. I miss having someone to chat to when I get home. I put the TV or some music so <sup>background noise</sup>  
<sup>lonely</sup>  
there's some background noise. the silence makes me feel so alone. Sometimes I will be sat  
<sup>wasting time / inactive</sup>  
watching trash TV and thinking I should be out doing something rather than watching this  
<sup>doing</sup> rubbish. I read a lot but <sup>tired / depressed</sup> sometimes I am too tired and just want to veg out. But it's been good  
<sup>unhealthy to be dependent</sup>  
to move out of mum and dads as it's not healthy to rely on them as they won't last forever. I  
<sup>independence</sup> become independent and made my own decisions. <sup>support</sup> It's good they still there when I need them.  
<sup>distance</sup> It's good to have some distance as when I was at home <sup>conflict</sup> I was arguing a lot with my dad and  
<sup>moving out</sup>  
that was made me decide it was time to go.

# A Visual Model of the Coding Process in Qualitative Research

## 1.5. 3. Computer software packages for qualitative analysis

---

Various packages have been developed to allow the researcher to organize, code and search data such as ATLAS.ti, used for large bodies of textual, graphical and audio and video data.

### Qualitative Analysis Software

- Atlas.ti (<http://www.atlasti.com>)
- NVIVO (<http://www.qsrinternational.com>)
- QDA Miner (<http://provalisresearch.com>)
- Content Analysis
  - LightSide (<http://www.cs.cmu.edu/~emayfiel/side.html>)

LightSIDE: Machine Learning for Text

## The software helps in:

---

- ❑ Data storage and management
- ❑ Data searching and retrieval
- ❑ Coding
- ❑ Developing and testing theory
- ❑ Writing reports

However, they cannot replace the human as they lack the capacity to think, reflect and Analyse.

# Test yourself

---

- ❑ What is the difference between an interview and a focus group?
- ❑ Can these qualitative tools be used in quantitative research?
- ❑ Explain the term ‘probe’.
- ❑ How can you code the data?
- ❑ How can you identify themes in an interview?
- ❑ Explain briefly what is meant by: open coding, axial coding and selective coding.
