

Session 5 Summary

Key Points Covered:

1. Systematic classification of risks into 7 main families
2. In-depth analysis of each family's characteristics and risks
3. Practical application through packaging workshop risk assessment simulation
4. Concept integration linking to the "from hazard to action" chain

Key Takeaways for Trainees:

- ✓ Systematic understanding of risk nature and classifications
- ✓ Practical tool for risk assessment in various work environments
- ✓ Analytical skill to connect risks and study their mutual impact
- ✓ Planning capability to develop integrated control plans

Core Message:

"Risk management is not just about identifying hazards, but rather an integrated system that starts with proper classification and ends with effective control plans, coupled with a deep understanding of the interrelationships between different risk types."

Next Step:

Apply this knowledge in the final project of Chapter One, where all concepts from the five sessions will be integrated into a comprehensive case study.
