

Exercise N° 02:**Analysis of a Housing project****Collective Housing****I. PRESENTATION:****▪ Project**

(Location, year of construction, architects, guiding idea and principles, etc.)

▪ Program

(type of houses, number...) (to be illustrated on a plan)

II. ANALYSIS :**1. Ground Plan Level**

- Type of implantation of residential projects (linear, annular, combined,.....)
- Accessibility and service
 - a) Composition of the ground plane
 - b) Urban structure
 - c) The division (blocks)
 - d) Occupation built/ block : (exploded, centered, peripheral, lateral,)
- Study of the urban void
 - a) Highlighting linear and punctual elements (streets, alleys, squares, parking,..)
Circulation: mechanical / pedestrian
 - b) Hierarchy
 - c) Treatment and use of the urban void (streets and squares)

2. Level of the building

- Apartment assembly mode (axial addition of identical units (linear), in different directions (polygonal, annular)... without the possibility of addition (solitary)....}
- Circulation Mode (Horizontal, Vertical, Combined)
- Number and type of Apartments per (landing/passageway, access gallery)
- Identification of collective spaces.

3. House level

- Qualitative and quantitative program
- Distribution mode (centered, linear, mixed)
- Spatial polarities: public / private; Common/Individual; night/day...
