Work N° 06: Designing Questionnaires, Interviews, and Observation

In previous sessions, we have focused on how to formulate a research title, define the research problem, and design a data collection tool. This foundation enables you to identify the appropriate research methodology and create a suitable tool to collection data.

Each group must choose a research problem. Based on this, they will select an appropriate data collection tool and design it according to the principles and methods discussed in the lecture.

Additionally, each group should be able to answer the question: **Why was this tool chosen for this research?**
